TECHNICAL DATA SHEET

UMITAN I/FI LIQ.

FATTENING FOR SKINS

CHEMICAL COMPOSITION

Fatliquor based on fish oils selected and sulfitated

FEATURES

Appearance:	reddish oily
Fat:	65 - 75%
pH solution at 10 %:	6 - 7
Ionic charge:	anionic
Compatibility:	stable in wide pH area
Storage stability:	6 months in normal conditions
Stabilità al cromo:	yes
Stabilità agli elettroliti:	yes

PROPERTY

UMITAN I / FI Liq is a fatliquor formulated in order to obtain a total balance between penetration and fibrillar filling. If used alone, as the only component of the fattening formula, it gives the skin a soft, full and silky surface feel. UMITAN I / FI can be used in mixture with other oils, especially when they are difficult to penetrate due to their characteristic of coarse and milky fat emulsion. The other penetrating power of UMITAN I / FI conveys these coarse emulsions and contributes to their distribution in depth.

HOW TO USE

We suggest the use in proportions ranging from 10-19% as the only fattening, 3-5% in conjunction with other fatliquors to give roundness and improve the softness of the leather.
