

INTISO chemicals

di Intiso Pietro Livio

TECHNICAL DATA SHEET

UMITAN I / PE LIQ.

FATTENING FOR SKINS

CHEMICAL COMPOSITION

Fatliquor based on fish oils selected and sulfitated

FEATURES

Appearance:	Dark brown oily
Fat:	60-65%
pH in solution at 10%:	6.5 - 7.5

PROPERTY

UMITAN I / PE Liq is a fattening formulated in order to obtain a balance between penetration and total filling fibrillar. If used alone, as the only component of the formula fattening, gives the skin a soft, full and silky touch surface. UMITAN I / PE can be used in mixture with other oils, especially when they are difficult to penetrate given their characteristic fat emulsion rough and cloudy. The other penetrating power of UMITAN I / PE conveys these coarse emulsions and contributes to their distribution in depth.

HOW TO USE

We recommend the use in proportions ranging from 10-19% as fattening only, from 3 to 5% in union with other fatliquors to give roundness and enhance the softness of the leather.
